

QUALIFICATION FOR DEEP AND ULTRA-LOW TEMPERATURE FREEZERS

«TESTING ENSURES THE QUALITY OF YOUR PRODUCT»

Currently, the demand for the storage of medical products in the ultra-low temperature range is at an all time high. Due to the development of new drugs that require storage in ultra-low temperatures, this is set to increase in the future. In order to guarantee safe and GMP-compliant storage of the products in question, the selected storage refrigerators must be tested and qualified accordingly. The stability of the required temperatures is a top priority and must be checked with the utmost care. We offer in our service portfolio a complete package of the required services.

OUR SERVICES

- › Consultation and evaluation of the scope of services
- › Preparation of mapping plans
- › Creating the documentation, from the qualification plan to the required test plans up to the final report
- › Planning, coordination and implementation of the temperature mapping on site
- › Planning, coordination and implementation the qualification activities on site Complete test equipment management for the mapping
- › Complete test equipment management for the mapping
- › Annual calibration of the monitoring sensor

Specially developed UTL measuring and test equipment
